

## Scenario 2

Maria, Jina and Nantia are 17 years old and classmates. During the pandemic period but not in a general lockdown the three girls would sit for a formal exam at school. That morning Maria did not feel very well but she considered that this was due to the rapid change of the weather. She had neither cough nor a fever. She had a light headache but nothing too serious to worry about so she decided to go to school and take the exam without discussing it with anyone else. Three days later, Jina and Nantia who sat near Maria were positive to coronavirus and Nantia had already a fever. That day, the two girls phoned Maria and blamed her for the whole situation and for her irresponsibility!!! One month later, the Nantia's grandmother died of coronavirus. Additionally, Jina's father got ill too and after ten days in hospital he fortunately returned home (although extremely exhausted and weak). That day, Nantia's mother (who had lost her mother) sued Maria's family for not having followed covid restrictions.

P.S. Nantia's grandmother was the favorite Grandmother of the whole girls' group. Actually, she had raised all three girls.

Q1: How do you think that Maria was feeling in the first place when her two friends were infected?

Q2: How do you think that Maria was feeling after the death of Nantia's grandmother?

Q3: How do you think Nantia and Jina feel?

Q4: Do you think that Maria is irresponsible?

Q5: Do you think that Nantia's family is overreactive?

Q6: Is this bullying?

Q7: Who is right and who is wrong?

Q8: After one month which will be the situation between the friends?

Q9: What would you do if you were in Maria's position (without knowing the results of her action)?
